

ShowAll & Unlock All

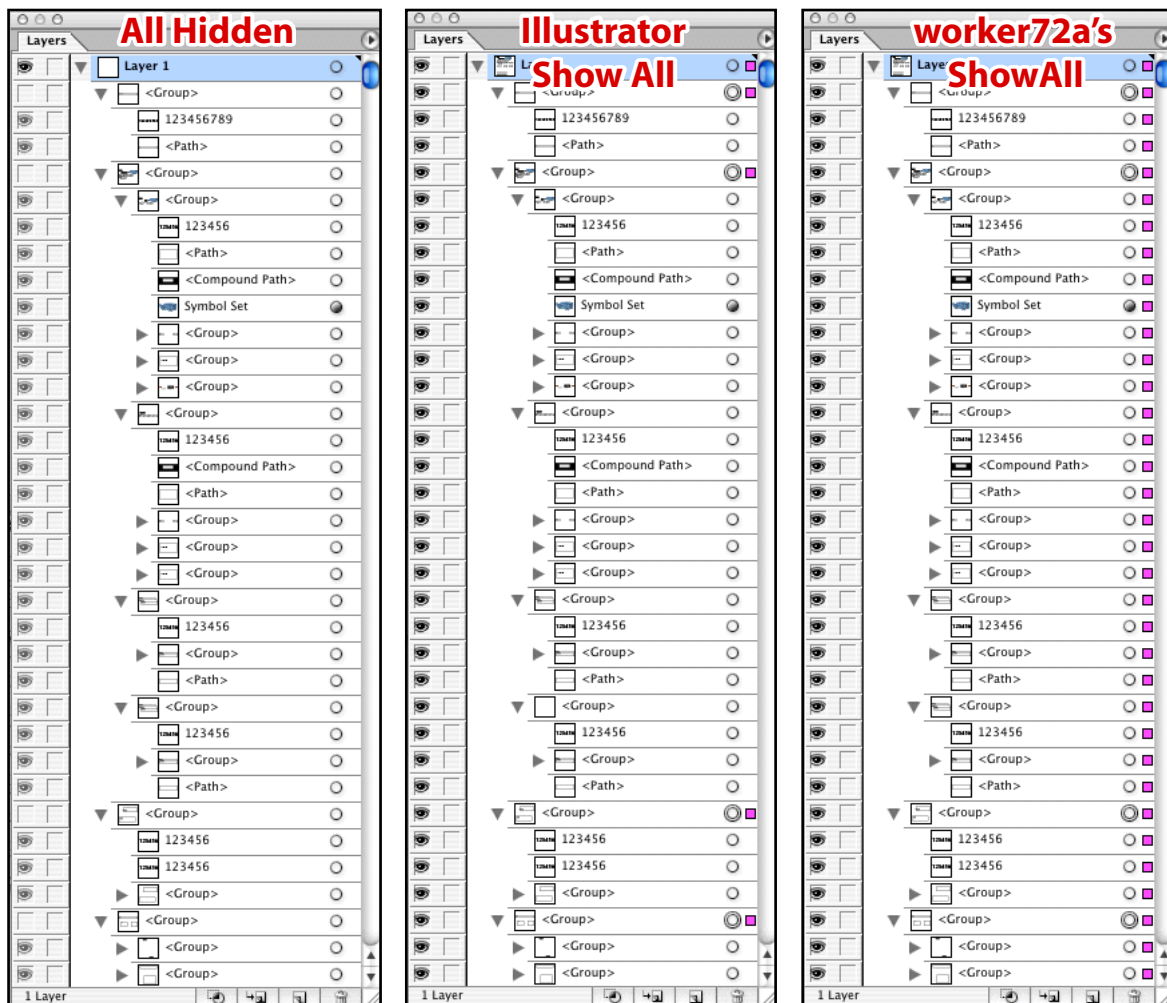

ShowAll and UnlockAll are Adobe Illustrator® CS plug-ins designed as alternates to Illustrator's buggy Show All and Unlock All commands. ShowAll and UnlockAll end with all shown or unlocked artwork selected, whereas the native commands do not.

Installation

Put the plug-in(s) in your Plug-ins folder in the Illustrator CS application folder. The new ShowAll and/or UnlockAll commands will appear under the Object menu.

Compare Performance

- Create an Illustrator document with a variety of object types (text, symbols, etc.) and group them.
- Select all and Hide (or Lock) Selection.
- Use Illustrator's Show All and note the selection state of the artwork in an expanded view in the Layers.
- Select all and hide or lock again. Use worker72a's ShowAll or UnlockAll and note the difference.
